JOURNAL OF
COMPUTATIONAL AND
APPLIED MATHEMATICS

Subject Index to Volumes 81–90 (1998)

	Vol	pp
Absorbing boundaries	87	243
Adaptive Nyström–Cowell methods	81	115
Adaptive grid generation	90	225
Adaptivity	90	187
ADI methods	89	39
Advection–diffusion	82	433
Advection–diffusion equations	87	227
Aerodynamic flow	82	423
Airy functions	89	97
Algebraic Riccati equation	86	17
Algebraic equation	82	229
Algebraic multilevel iterative method	89	135
Algorithm	82	199
	82	213
Alternating direction	86	73
Angular scattering	82	447
Apéry's numbers	83	123
A posteriori error estimates	87	227
Appell function	85	325
Appell hypergeometric functions	82	447
Approximation	83	147
	84	189
Arnoldi method	87	303
Arnoldi process	86	53
Arnoldi's method	82	185
A-stability	81	181
	81	197
Asymptotic behavior of solution	88	225
Asymptotic behavior	81	75
	89	97
Asymptotic expansions	89	87

Asymptotic factorization	85	287
Asymptotic properties	87	87
Asymptotic rate of convergence	82	229
Asymptotic stability	82	367
	84	161
Asymptotic values	87	285
Asymptotically optimal	90	187
Asymptotics	81	211
	81	217
	82	59
Atom–atom collisions	82	447
Atom–diatom collisions	82	447
Attractive region	88	79
Automatic quadrature	87	339
Baker–Gammel–Wills conjecture	86	287
Banach Algebras	83	55
Banach spaces	83	55
Barycentric representation	86	45
BDM space	85	239
Bergman kernel	82	333
Bernstein polynomials	81	101
Besov spaces	85	315
Bessel functions	85	169
Bessel polynomials	90	57
Best approximation	81	145
Best bounds	82	199
	82	213
Best uniform approximation	82	185
Bifurcation	82	367
Biharmonic equation	89	263
Biorthogonal polynomials	86	219
Birkhoff interpolation	85	263
Bivariate rational interpolants	84	137
Bivariate splines	90	119
Block Hankel	86	311
Block asynchronous SOR-methods	83	1
Block diagonal dominance	83	1
Blow-up of solution	88	225
Bound-states problem	87	215
Boundary immobilisation	81	135
Boundary integrals	81	311
Boundary problem	83	195
Boundary value methods	82	299

Boundary value methods	87	135
Boundary value problems	86	271
	88	129
	88	15
Boundary value problem	88	57
Butcher series	82	159
Calculus of variations	88	363
Cauchy matrix	86	103
Cauchy principal value integrals	89	225
Cauchy principal value integral	82	93
	89	257
Cayley transform	89	219
Cell discretization	82	389
Chain sequences	82	59
Characterisation	84	137
Characteristic functions	84	161
Charlier polynomials	90	51
	90	57
Cheap Jacobian information	82	159
Chebyshev abscissae	81	83
Chebyshev iterations	82	185
Chebyshev polynomials	85	1
	87	339
Chip design	82	159
Christoffel transformation	85	67
Circuit simulation	82	367
	82	79
Circular arcs	81	145
Clebsch–Gordan coefficients	85	53
Close-to-convex	88	327
Coherent pairs of measures	81	217
Collocation	81	29
Combinatorial Radon transform	83	251
Combined method	81	1
Computational fluid dynamics	82	423
Computational methods	81	349
	85	53
Cone-theoretic fixed-point theorem	88	71
Cone	88	3
	88	57
Confluent Vandermonde determinant	85	263
Confluent hyper-geometric functions	89	97

Confluent hypergeometric function	89	87
Conformal mapping	82	333
	90	1
Conjugate gradient	84	243
Connection and linearization problems	89	171
Connection coefficients	90	57
Connection problems	87	321
	89	309
	90	45
Connection problem	84	257
Constraints	86	271
Contact problem	82	313
Continuation methods	84	1
Continuous Runge–Kutta methods	82	261
Convection–diffusion equation	82	389
	83	165
Convergence dominated theorem	90	15
Convergence in capacity	86	287
Convergence of iteration methods	82	407
Convergence theorem	82	171
Convergence	83	55
	84	189
	85	333
	87	359
	87	373
	87	39
Convexity conditions	84	23
Convex	88	327
Convolution equation	83	39
Convolution method	84	101
Coulomb fluid method	82	59
Coupling strategy	81	1
	81	1
CP methods	88	289
Cross-validation	83	39
Crowding	83	205
Cryer's algorithm	83	137
Cubature formula	84	15
Cubic spline	87	359
DAE	82	41
D-convergence	85	225
DDE	85	225
Defect correction iteration	85	287

Definite inner product	81	165
Deformation theory of plasticity	82	313
Degree of precision	86	205
Delay	84	161
Density function	90	187
Derivatives	82	199
	82	213
Diagonal iterations	89	73
Diagonally implicit Runge–Kutta methods	87	119
Difference equations	81	75
	82	447
	85	123
	88	103
Difference equation	84	219
	90	57
Difference method	81	229
Difference schemes	89	39
Difference-functional inequalities	84	189
Differential algebraic equation	82	41
Differential equation solver on a chip	82	117
Differential equations with “maxima”	83	237
Differential equations	83	257
	88	377
Differential equation	90	57
Differential inequalities	81	59
Differential operators	89	213
Differential–algebraic equation	82	367
	82	79
	87	135
Diffraction of Kelvin waves	84	147
Digraph	88	349
Dilogarithm	85	325
Dipolar	82	291
Dirac-delta distribution	84	101
Discrepancy	84	107
	90	25
Discrete inversion formulas	89	171
Discrete orthogonal polynomials	87	321
Discrete polynomials	89	171
Discrete-time relaxation	86	359
Disfocal ordinary differential equations	88	71
Dissipative systems	89	73
Distortion	89	1
Distributed computing	82	433

Distributed delay	88	79
Distribution networks	84	81
Divide-and-conquer method	86	141
Dixon's theorem	88	269
Domain decomposition	82	433
	87	11
	90	225
Durand–Kerner's method	82	465
E-algorithm	85	181
E-prediction	85	181
Eigenfunctions	88	15
Eigenvalue decomposition	86	3
Eigenvalue problem	86	17
	88	289
Eigenvalues	86	125
	88	15
Elasticity	87	39
Electromagnetic multisphere-scattering	85	53
Elliptic cylinder	85	203
Elliptic second-order partial differential equations	82	389
Elliptic systems	87	39
Entropy convergence	90	159
Equilibria	82	41
Error analysis	86	347
	88	289
Error bounds	86	347
	86	53
Error bound	82	93
Error estimates	87	373
	87	39
Error propagation	82	447
Error series	83	55
Existence and asymptotic behaviour	83	237
Expansions of polynomials	89	155
Exponential function	89	97
Exponentially-fitted methods	87	215
Extrapolation method	87	339
Extrapolation	81	257
	81	311
Extremal polynomial	86	205
Faber iterations	82	185
Faber series	83	205

Fast algorithm	86	219
Fast solution	86	103
Feedforward neural nets	82	117
FEM	84	45
FFT	87	339
Filter function	83	39
Finite difference method	81	1
Finite differences	81	135
Finite element methods	87	227
Finite element method	84	119
	90	187
Finite elements	87	39
Finite elliptic equation	81	1
Fixed points	82	465
	88	103
Fixed point	88	3
Floquet multiplier	82	367
Flows in networks	84	81
Fluid dynamic equations	90	225
Formal orthogonal polynomials	81	165
Forms	88	377
Fornberg's methods	83	205
Fourier series	87	261
Fourth-order difference equation	90	45
Fourth-order method	83	131
Froissart doublets	87	199
Froude number	82	3
Full discrete approximation	85	333
Galerkin method	81	311
	85	11
	89	263
Galerkin	81	29
Gamma function	87	195
	88	255
Gamma	90	15
Gaunt coefficients	85	53
Gauss methods	90	241
Gauss's second theorem	88	269
Gauss–Seidel method	83	115
Gauss–Green theorem	89	263
Gauss–Turán-type quadratures	86	205
Gaussian elimination	86	177
GDN-stability	85	225

Gegenbauer polynomials	90	57
General linear method	81	181
	87	285
Generalized Bessel polynomials	85	87
Generalized cross validation	87	261
Generalized eigenvalue problem	86	141
	89	135
Generalized hypergeometric functions	85	271
	86	375
Generalized hypergeometric series	88	269
Generalized inverse for vectors	84	137
Generating functions	82	447
Generating function	85	37
Geodynamics	82	313
	84	45
Geometric Hermite interpolation	81	299
Geometric continuity	81	145
Geometric convergence	85	37
Geronimus transformation	85	67
Gibbs' phenomenon	87	359
Global error estimation	82	21
GMRES	83	165
Graded mesh	85	11
Green's function	88	103
Growth factor	86	177
GUI	82	351
Hadamard finite-part integral	89	257
Hahn polynomials	90	57
Hamburger moment problem	90	159
Hamiltonian matrix	86	17
Hamiltonian systems	90	241
Hankel determinant	90	159
Hankel matrix	86	103
Harmonic balance	82	367
Harmonic mean	87	195
Hausdorff distance	81	145
Heat conduction equation	89	39
Heat conduction	88	119
Helmholtz equation	84	147
H-matrix	83	115
Hermite polynomials	81	165
	90	57
Hermite–Sobolev polynomials	81	165

High contrast conductivity	87	61
Homogeneous fluid	88	239
Householder matrices	86	125
Hybrid methods	87	215
Hybrid numerical methods	87	61
Hybrid transformations	81	257
Hyperasymptotics	89	87
Hypergeometric differential equation	89	155
Hypergeometric functions	88	327
	89	87
	90	137
Hypergeometric representation	90	57
Hypergeometric series	83	185
	85	325
Hypergeometric	83	119
Hypersingular BIE	81	29
Hypersphere	84	15
Hyperterminants	89	87
H-matrix	83	115
Identities	83	127
Ill-posed problem	83	39
Implicit methods for ODEs	87	1
Implicit methods	83	269
	90	241
Implicitly defined curve	84	1
Impulses	84	189
Impulsive equations	88	149
Impulsive reaction–diffusion equations	88	175
Incomplete factorization preconditioning	86	387
Index-3 DAEs from multibody systems	82	117
Index	82	367
	82	79
Inequalities	82	59
	87	195
Initial-value problem	88	289
Injectivity	83	251
Instability	86	387
	88	125
Integral equation	82	333
Integral formulas	81	349
Integral representations	88	377
Interconnect analysis	86	3
Interface relaxation	87	11

Interior-point methods	86	149
Interpolating (m, l, s)-splines	87	373
Interpolation method	90	119
Interpolation polynomials	83	55
Interpolation	83	147
	86	45
	87	359
Interpolatory quadrature formulae	81	83
Invariant subspace	86	17
Inverse problem	88	377
Inverse scattering	81	269
Inverse two-sided Laplace transform	90	159
Inversion of Laplace transform	83	39
Isospectral flows	82	261
	89	219
Iterative and parallel solver	83	71
Iterative methods	86	73
	87	21
Iterative method	83	147
	90	1
Iterative schemes	82	129
Jacobi functions of the first kind	82	447
Jacobi functions of the second kind	82	447
Jacobi polynomials	82	447
	90	137
	90	57
Jordan algebras	86	149
Jumping nonlinearities	82	279
k - ε equations	83	11
Kadomtsev–Petviashvili	90	95
Kampé de Fériet functions	83	185
Kampé de Fériet	83	119
Kinetic boundary layer	89	199
Kinetic equations	90	225
Korteweg–de Vries	90	95
Krawchouk polynomials	90	57
Krylov subspace methods	83	165
Krylov subspace	82	185
	84	243
Kummer's theorem	88	269

LAPACK	86	195
Lagrange interpolation	85	113
Laguerre polynomials	87	87
	89	213
	90	57
Laguerre–Hahn polynomials	85	67
Laurent polynomials	85	37
Least squares	87	39
Least-squares minimization	81	181
Levinson algorithm	86	219
	86	335
Liapunov functional	88	79
Line relaxation	85	345
Line-soliton	90	95
Linear Complementarity Problem	83	137
Linear differential equation with constant delay	88	185
Linear differential equations	89	53
Linear functional	85	37
Linear programming	83	137
Linear systems	81	257
	86	149
Linearization problem	84	257
Linearized implicit finite difference method	90	95
Lobatto IIIA formulae	82	129
Locking	89	119
Lommel functions	85	169
Look-ahead	86	219
	86	311
Low discrepancy	83	87
L-stability	81	181
Lucas property	83	123
Lump type soliton	90	95
Magnetohydrodynamics	82	41
Matrices	83	127
Matrix equations	86	73
Matrix	86	297
Maximum order	83	269
Maximum principles	88	149
Measures on the unit circle	85	123
Meixner polynomials	82	59
	90	51
	90	57
Mellin transforms	85	271

Melting	84	45
Meshsize function	90	187
Method of collocation	83	147
Method of lines	82	299
Minimal and near-minimal cubature formulae	85	113
Minimal residual	84	243
Minimal surfaces	85	239
Minimax series	81	101
	83	55
	85	315
Minimum-distance estimator	84	207
Mixed finite elements	85	19
Mixed finite element	89	119
Mixed method	85	239
Model Boltzmann equation	87	169
Modified Newton iteration	87	1
Modified Romberg scheme	84	1
Modified quadrature formula	82	93
Modified trapezoidal rule	84	1
Moment matching technique	86	3
Mono-implicit Runge–Kutta (Nyström) methods	87	147
Monodromy matrix	82	367
Moving grid methods	85	333
Multi-step methods	82	105
Multiconductor transmission line (MTL) equations	86	3
Multigrid methods	82	379
	85	345
Multigrid	85	351
Multilevel preconditioning	83	165
Multiple positive solutions	88	71
Multistep Runge–Kutta methods	85	145
Multistep method	82	79
Multivariate Padé approximants	82	149
Multivariate interpolation	85	263
Navier–Stokes equations	81	349
	82	379
Navier–Stokes equation	81	19
Navier–Stokes' equations	81	229
